TITLE: Continuous furnace for shield annealing

PERIODICAL: Referativnyy zhurnal, Metallurgiya, no. 11, 1962, 10, abstract 11B56P (Pol. pat., no. 44895, September 21, 1961)

TEXT: A continuous vertical type inverted U-shaped furnace for shield annealing consists of corresponding heating through compartments with electrical heating. A chain conveyor with suspenders (or baskets) for annealed pieces passes through the furnace, whereby in the lower part of the furnace the conveyor passes through gates with attachments filled with a liquid (e.g. water). When the workpieces are charged the conveyor with suspenders sinks into the liquid and emerges already in the heating compartments. In its surface part the liquid is in a state near to boiling and the vapor produces the necessary shield in the

Fresh rose hips and their preserves as a source of vitamin C. M. Szczyglowa, J. Luzzakowa, and J. Siczkowna (Państwowy Zakład Hig., Warsaw, Poland). Roczniki Państwowego Zakładu Hig. 1, 623-32 (1950) (English summary).—Vitamin C content was detd. of rose hips (*Rosa canina*, *R. gallica condita*, and *R. rugosa*). Whole fresh hips contain 545 mg. %, hips without pips 661 mg. %, pulp 847 mg. %. In sugar preserves the vitamin C content decreased 5-6% during the first half year. Boiling water exts. about 40% of vitamin C from fresh hips and about 64% from dried ones. During the drying process 45-90% of vitamin C are lost. Vitamin C was extd. with 2% oxalic acid and titrated with dichlorophenolindophenol. W. Szybalski

Abstract: A film illustrating the concept of Selye's "General Adaptation Syndrome" was shown, with a lively discussion afterwards. The consensus of the discussants seemed to be that there were several inadequacies to Selye's theory; e.g. the autonomic nervous system is not given sufficient consideration. Table illustrating signs accompanying the 3 stages of the general adaptation syndrome.

AUTHORS: Prosnak, Włodzimierz, Juliusz and Łuczywek, Eugeniusz
(Warsaw)

TITLE: Weighing machine for testing propellers rotating in
opposite directions

PERIODICAL: Archiwum budowy maszyn, v. 9, no. 1, 1962, 145 - 167

TEXT: In order to investigate the mutual influence of two concentrically positioned propellers running in opposite directions under various working conditions the test rig has been designed in order to measure simultaneously the drags and torques of each of the two propellers revolving at various speeds, at varied distances and with different positions of blade angles. The best rig was used in the wind tunnel (1120 mm air flow area) at the Department of Aerodynamics of the Warsaw Polytechnic Institute. The performance of the model was studied in order to verify its suitability for dimensional analysis purposes when designing full scale test rig for full size propellers. The authors give descriptions and drawings of hub arrangement for adjusting blade angles, the Wheatstone bridge cir-

cuits for measuring the deflection of springs using tensometers, the 3-phase electric motor drive where the variable speeds have been obtained by changing the frequency according to the principle due to J. Bukowski (Zeszyt Instytutu Aerodynamicznego, Warszawa 1939 - no. 7) and the calibration apparatus. The description of the test procedure, the results of the preliminary tests performed on two-bladed adjustable propellers of known characteristics and the discussion on the reliability and suggestions for improvement conclude the paper. There are 20 figures.

TITLE: Mach number and specific heat ratio effects in axisymmetric flow on the distance of the shock wave

SOURCE: Archiwum budowy maszyn, v. 13, no. 3, 1966, 357-363

TOPIC TAGS: detached shock wave, axisymmetric flow, stagnation point, shock wave physics, axisymmetric supersonic flow, shock stand off distance, Mach number effect, specific heat ratio effect, integral relation computation method, computer programming/GIER digital computer

ABSTRACT: The distance between a detached shock wave and the stagnation point on the flat nose of a circular cylinder in axisymmetric supersonic flow was computed by the integral relations method, in order to investigate the influence of the Mach number and the specific heat ratio on shock standoff distance. The computa-

Card 1/2

L 02204-67

ACC NR: AP6032601

tions were performed in 20 cases with different Mach numbers and specific heat ratios. The programming for the GIER digital computer used was developed by co-author Luczywek. Comparison of computed values and experimental data yielded no essential discrepancies. Orig. art. has: 4 figures, 1 table, and 4 formulas. [Based on authors' abstract]

The sympathico-adrenal system and the phagocytosis of the leucocytes. V. Kokas, G. Ludany, and J. Vajku (Univ. Budapest, Hung.). *Quart. J. Exptl. Physiol.*, **50**, 80-100 (1951).—All forms of sympathetic stimulation cause a transitory increase in the phagocytosis-stimulating property of the serum by releasing some substance or substances into the blood stream. Among other unidentified organs the adrenals produce these substances. They act partly as opsonins and partly by direct stimulation of the leucocytes. They are not identical with adrenaline, deoxycorticosterone, or other steroids present in the adrenal cortex ext. used. Histamine may increase phagocytosis but is not the active substance. The activity may be found among the 11-oxy-steroids or in the lecithin-cholesterol ratio. 40 references.

Action of histamine and antihistamines on phagocytosis
G. Ludday and J. Vajda (II Chir. Klinik, Budapest) Arch.
Intern. Pharmacodynamie 85, 485-494 (1951). Histamine
(1:50,000-1:500,000) definitely increases the phagocytic
action of surviving rat leucocytes. Antistine and dehistine
(1:1,000-1:5,000) decrease the phagocytosis. Intravenous
antistine has no effect in man or dog. Both antihistamines
(1:10,000) inhibit the effect of histamine on the leucocytes.

Phagocytosis and the nervous system. G. Ludany, J. Vajda, and E. Erdos (Univ. Budapest). *Arch. intern. pharmacodynamie* 87, 49-63 (1951).—There was no increase in phagocytosis by the dog aqueous humor after stimulation of the sympathetic vessels of the neck. Intravenous adrenaline (0.01 mg./kg.) or *dl*-noradrenaline (0.02 mg./kg.) caused a marked increase in phagocytosis in dog serum, whether or not the suprarenals were intact, but had no effect on phagocytosis *in vitro*. Acetylcholine and eserine had no definite effects. M. L. C. Bernheim

RX

Insulin and the bacterial phagocytosis of leucocytes. R. Lovel, G. Lászányi, and J. Vajda (Univ. Budapest). *Z. Vitamin-, Hormon- u. Fermentforsch.* 4, 523-41 (1953) (in German); cf. *C.A.* 45, 7237; 46, 1114f.—Contrary to the findings of Bayer and Form (*C.A.* 20, 3314), it was found that insulin does not affect the bacterial phagocytosis of rat leucocytes surviving *in vitro*. The capacity of serum to promote phagocytosis *in vivo* is reversibly reduced by insulin; the av. decrease was 24-30% in human subjects and 28% in rabbits. Glucose slightly counteracts this insulin effect but does not abolish it. Erich Hirschberg

CA

Hyaluronidase and phagocytosis by leucocytes. G. Ludany, T. Orbán, and J. Vajda (Univ. Budapest). Arch. intern. pharmacodynamic 88, 490-502(1952).—The phagocytosis by leucocytes of *Micrococcus pyogenes* var. *aureus* and *Salmonella typhosa* is increased more than 50% by hyaluronidase. Heated enzyme has no effect. Antistine (1:20,000) counteracts the increase. M. L. C. Bernheim

Intravenous calcium chloride and absorption of sugar from the gut. G. Ludány, G. Sutó-Nagy, J. Cservéný, and L. Csai (Univ. Budapest, Hung.). *Arch. intern. pharmacodynamic* 89, 48-54 (1952).—Intravenous CaCl_2 decreases the absorption of glucose and xylose from the intestine by 20 and 7%, resp. The blood inorg. P level is increased.

M. L. C. Bernheim

3577. LUDÁNY G. and VAJDA G. Budapesti Orvost. Egyetem Körélettani Intézete, Budapest. *Nucleinsavak hatása a leucocyták bakterium phagocytosisára. Effects of nucleic acids on phagocytosis of bacteria by leucocytes KISERL. ORVOSTUD. 1955, 7/4 (418-420) Tables 2 RNA and DNA (as Na salts) increased the phagocytosis of *M. pyogenes aureus* by surviving rat leucocytes in vitro, even at high dilution. At 1:100,000, the average effect was still outside the limits of experimental error; at 1:10,000 it was +29 or +33%. The degree of phagocytosis was determined by the method of Wright and the results were statistically analysed.
